Shoe studs

Slip protection for boots and shoes

Maxigrip is a screw on stud that is easy to fit yourself.

Maxigrip is an ice stud that you screw into the sole of your shoes when needed. They are dismantled just as easily when you want to use them on different pair of shoes.

Maxigrip can be used by anyone who doesn't want to slip. Maxigrip prevents injuries and is recommended by physiotherapists.

Maxigrip are popular with outdoor people and especially appreciated by hunters, fishermen, lumber jacks, winter joggers, postmen, firemen...

The Maxigrip shoe stud is available in two designs; the first with a grip ring and the other in hard metal. The sole of the shoe to be fitted with the studs must be at least 10 mm thick. The hard metal version (HM) is recommended due to its durability. The grip ring model (X) is slightly cheaper and more suited for shoes/boots with a very soft sole.
